

CLAIMS

We claim:

1. A laundry caddy, comprising:

a box including a bottom wall with front and opposed sides as well as a front wall and a pair of opposed side walls and being secured to, and extending upwardly from, said front and opposed sides of said bottom wall, said box also including a top wall being hingedly secured to one of said opposed side walls and a back wall being hingedly secured to one of said opposed side walls, said top wall and said back wall each being capable of moving between a closed condition wherein access to the interior of said box is not easily obtained and an open condition wherein access to the interior of said box is easily obtained;

a pair of wheels being secured to said bottom wall of said box;

a handle being secured to said box and extending upwardly therefrom; and,

a pair of latches being secured to said box for selectively retaining said top wall and said back wall in a closed condition.

2. A laundry caddy, comprising:

a ventilated box including a bottom wall with front and opposed sides as well as a front wall and a pair of opposed side walls and being secured to, and extending upwardly from, said front and opposed sides of said bottom wall, said box also including a top wall being hingedly secured to one of said opposed side walls and a back wall being hingedly secured to one of said opposed side walls, said top

wall and said back wall each being capable of moving between a closed condition wherein access to the interior of said box is not easily obtained and an open condition wherein access to the interior of said box is easily obtained; a pair of wheels being secured to said bottom wall of said box; a pair of legs being secured to said bottom wall of said box remote from said pair of wheels for retaining said box in an upright state; a handle being secured to said front wall of said box and extending upwardly therefrom; and, a pair of latches being secured to said box for selectively retaining said top wall and said back wall in a closed condition.

3. A laundry caddy, comprising:

a box including a bottom wall with front and opposed sides as well as a front wall and a pair of opposed side walls and being integrally formed with, and extending upwardly from, said front and opposed sides of said bottom wall, said box also including a top wall being hingedly and removably secured to a first one of said opposed side walls and a back wall being hingedly and removably secured to a first one of said opposed side walls, said top wall and said back wall each being capable of moving between a closed condition wherein access to the interior of said box is not easily obtained and an open condition wherein access to the interior of said box is easily obtained, and said top, back and opposed side walls being provided with a plurality of ventilation openings; a pair of wheels being secured to said bottom wall of said box;

a pair of legs being secured to said bottom wall of said box remote from said pair of wheels for retaining said box in an upright state;
a handle being secured to said front wall of said box and extending upwardly therefrom;
and,
a pair of latches being secured to the second one of said opposed side walls for selectively retaining said top wall and said back wall in a closed condition.
